SUMMARY

Final-year B.Tech IT student with hands-on experience in LLM post-training, RLHF/DPO alignment pipelines, and full-stack deployment. Built and shipped production systems serving 800+ active users. Delivered AI/ML solutions to paying clients with a 5.0 rating on Freelancer. Proficient in Python, PyTorch, Hugging Face Transformers, Django, and cloud deployment. IBM AI Foundations certified.

EDUCATION

College of Engineering Roorkee (COER)
B.Tech in Information Technology

Roorkee, Uttarakhand
2022 – 2026

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript

ML & AI: PyTorch, TensorFlow, Hugging Face Transformers, PEFT/LoRA, LM-Evaluation-Harness, RLHF, DPO, RAG, Scikit-learn, OpenCV, Pandas, NumPy

Web & Deployment: Django, React, Next.js, Flask, Streamlit, Docker, Git/GitHub, AWS, VPS, REST APIs, CI/CD

Databases & Tools: PostgreSQL, MongoDB, GitHub Actions, Vercel, Render, Jupyter Notebook

Certifications: IBM AI Foundations (2024)

PROFESSIONAL EXPERIENCE

Ethara AI

LLM Post-Training Intern

Evaluated multimodal LLM outputs (text, image, audio, video) against structured rubrics to generate human preference datasets used directly in RLHF and DPO alignment pipelines.

Designed and implemented automated data filtering and validation pipelines using Pandas and Regex, reducing manual data-cleaning overhead by 30% and accelerating model training iteration cycles.

Collaborated with alignment researchers to assess model behavior across edge cases, improving dataset quality for fine-tuning large language models.

Remote

Jan 2026 – May 2026

FREELANCE EXPERIENCE

Freelancer.in

AI/ML Developer (Contract)

- Delivered an Indian market stock prediction system using LSTM neural networks and technical indicators (RSI, MACD) within client budget and timeline; received **5.0/5.0** client rating.
- Applied Markowitz mean-variance framework for portfolio optimization; benchmarked against buy-and-hold baseline, achieving closing price MAE of ~2.3%.
- Completed paid engagement with full client sign-off on project scope and deliverables.

Remote

Feb 2026

PROJECTS

RAG Evaluation CI/CD Pipeline | *Python, Groq API, TF-IDF, Streamlit, GitHub Actions* | Live Demo *Apr 2026 – Jun 2026*

- Built a production-grade RAG evaluation pipeline using LLM-as-a-Judge scoring via Groq API across 4 metrics: Faithfulness, Answer Relevance, Context Recall, and Semantic Similarity.
- Integrated CI/CD quality gates via GitHub Actions to automatically block pull request merges when any retrieval metric falls below 4.0/5.0, enforcing quality standards on every commit.
- Developed an interactive analytics dashboard with run comparison, metric trend history, and per-question retrieval inspection to systematically debug RAG pipeline failures.

COER GateFlow – Campus Entry Management System | *Django, PostgreSQL, MSG91, Python* | Live Demo *Nov 2025 – Apr 2026*

- Architected and deployed a campus-wide access control system serving **800+ active users** with 2,000+ daily interactions via encrypted QR-code verification, achieving **99.9% uptime**.
- Integrated MSG91 SMS API for real-time entry/exit notifications; built an administrative dashboard for access log monitoring and anomaly detection.

PaperFlow – Automated Exam Paper Generator | *Django, Python, JWT, PostgreSQL*

- Developed an automated exam paper generation system producing 500+ unique papers with role-based access control and support for high-concurrency faculty requests.
- Engineered an isolated PDF generation engine that reduced exam paper preparation time from **5 hours to under 10 minutes**, eliminating manual formatting bottlenecks.

Dec 2025 – Jan 2026
